

# RENTAL MARKET REPORT

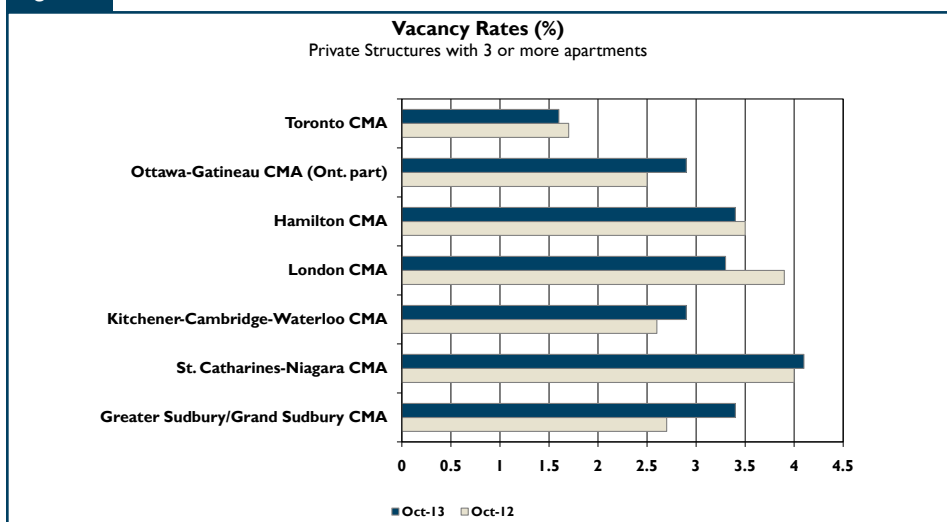

## Ontario Highlights\*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2013

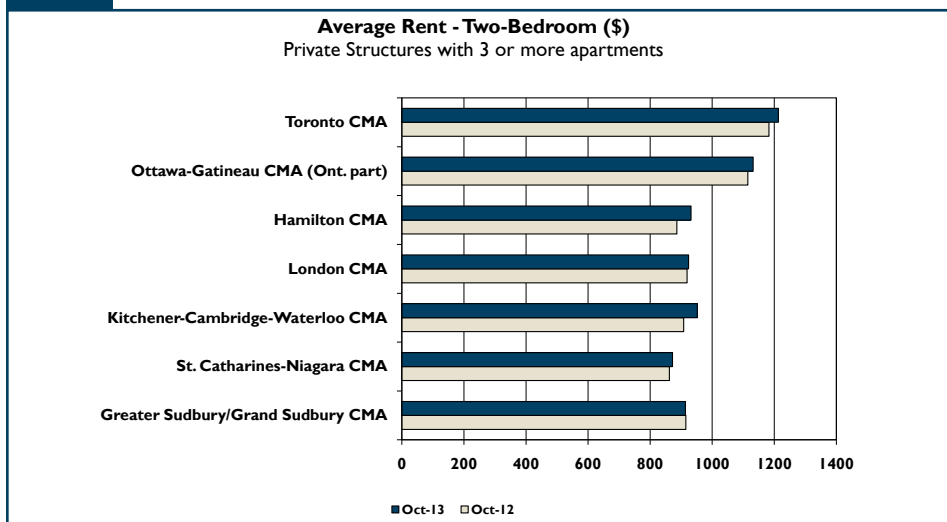

Figure 1

## Highlights

- Ontario vacancy rate remains stable at 2.6 per cent in fall of 2013.
- Fixed sample 2-bed apartment rents grew at a rate of 2.7 per cent in the fall of 2013 – in line with growth of 2.7 per cent last fall.
- Notable factors exerting downward pressure on vacancy rates include: improving job prospects and less first time buying demand.
- Notable factors exerting upward pressure on vacancy rates includes: less in-migration and more rental apartment completions.

Figure 2

\*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAAs.

According to Canada Mortgage and Housing Corporation's (CMHC) Fall 2013 Rental Market Survey, Ontario vacancy rates<sup>1</sup> remained stable in 2013. Vacancy rates moved higher for bachelor units (2.7%) but remained stable for all other bedroom types. Vacancy rates rose in Northern and Eastern Ontario, tightened in south-western Ontario and remained flat in GTA. The lowest vacancy rate was registered in Toronto (1.6%) and Guelph (1.9%) while the highest vacancy rates were registered in Windsor (5.9%) and Peterborough (4.8%).

## Factors Exerting Downward Pressure on Vacancy Rates

Several factors exerted downward pressure on Ontario vacancy rates. Improved job prospects particularly among youth aged 15 to 24 supported rental demand. Weaker job prospects since the recession ended in 2009 has encouraged young adults to stay home longer as per recent census Canada data. As a result the pool of potential renters has been steadily growing since 2009. However, sentiment among small to medium sized Ontario businesses has been growing encouraging more hiring over the past year. Improving job prospects likely encouraged more young adults to leave the parental home and form their own household. The high propensity to rent combined with less savings and employment history for this segment of the population supported demand for less expensive

rental accommodation over the past year.

The rising cost of ownership housing over the past year was a factor supporting rental demand. In an absolute sense, both higher prices and slightly higher mortgage rates contributed to the cost of ownership housing. On a relative basis, the cost gap between owning and renting also grew as rent increases failed to keep pace with the growth in home prices. First time buyers aged 25-44 are sensitive to changing economic conditions. While the story did vary by ownership market across the province, most first time buyers, some of which currently rent, postponed a home purchase and remained in rental accommodation longer. Most were unable to substitute into a lower priced home or had difficulty saving enough for their down payment.

## Factors Exerting Upward Pressure on Vacancy Rates

Net migration to the province has been less supportive of rental demand in recent years. Net migration into Ontario has slowed since 2010 largely due to lower net international migration and rising migratory outflows to other provinces. According to census data, most immigrants rent upon immediate arrival into Ontario as they lack the credit and job history to qualify for ownership housing. Meanwhile, Ontario has lost almost as many migrants to other provinces in 2013 as it did during the year

of 2006. Relatively stronger job growth in resource producing regions has encouraged Ontarians to leave the province in search of job opportunities elsewhere.

Secondary rental apartment completions have also been growing in the province of Ontario in recent years. While purpose-built completions did edge higher, they have not kept pace with condo rental apartment completions. Investors have in recent years purchased condominiums with the intention of leasing these units out upon completion. Condominiums have filled a void in the marketplace as less purpose built rental accommodation has been built in recent years to satisfy growing rental demand. Both Toronto and Ottawa registered significant increases in investor held condos during this year's survey. Condo rentals carry higher rents and create more competition particularly for higher priced purpose-built rental units.

## Ontario Rents Grow by 2.7 per cent in Fall 2013

Apartment rents for two bedroom units that were common to both 2012 and 2013 fall surveys<sup>2</sup> rose by 2.7 per cent. Fixed sample 2-bedroom apartment rents grew the fastest in Oshawa (4.6%) and Thunder Bay (4.6%) and grew the slowest in Barrie (1.4%) and Greater Sudbury (1.4%). The rate of increase in 2-bedroom units this fall exceeded the allowable rent increase for occupied units under

<sup>1</sup> Based on privately-initiated rental apartments structures of three or more units.

<sup>2</sup> When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2012 and 2013 Fall Rental Market, we can get a better indication of actual rent increases paid by most tenants.

the provincial guideline because of the large rent increases in vacant units. In Ontario, provincial legislation required that rent increases on occupied rental units be capped at the provincial guideline amount of 2.5 per cent in 2013. When units are vacated, they can be re-rented at the going market rate. Despite downward trending vacancy rates since 2004, rents failed to keep

pace with the market. Consequently, rent increases on turnover were particularly strong in the tighter markets such as the GTA, Thunder Bay and Guelph as vacant unit rents were “catching up” to the market in the fall of 2013.

Secondly, home ownership prices have been growing above the general rate

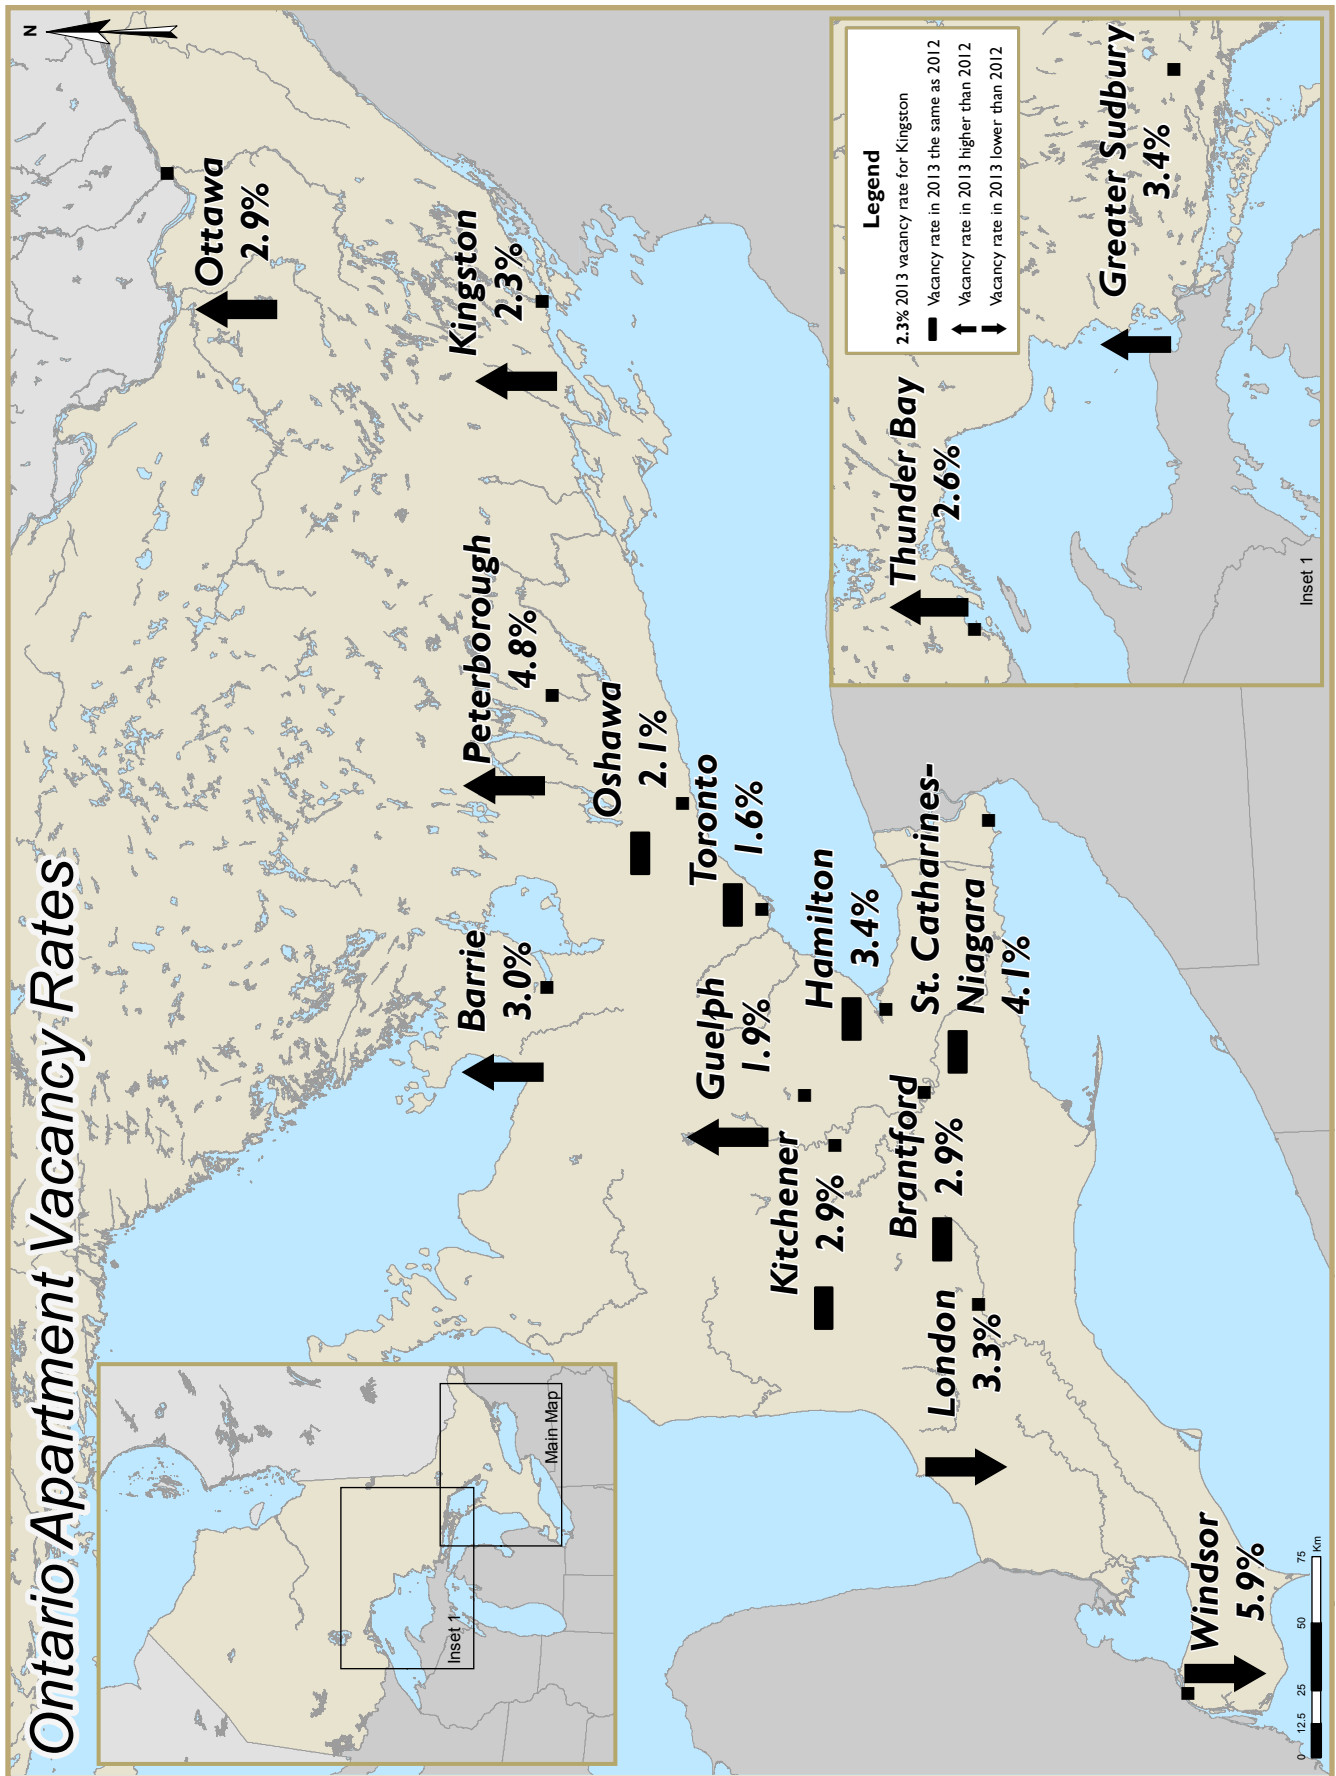

of inflation over the past several years. With the cost gap between owning and renting rising, rental units were able to maintain their competitiveness even with above guideline increases at turnover.

### ***An Explanation of CMHC’s Primary and Secondary Rental Market Surveys***

*CMHC’S Rental Market Survey and Secondary Rental Market Survey only include privately initiated structures.*

*The primary rental market encompasses units in structures with three or more units, composed of self-contained units where the primary purpose of the structure is to house rental tenants. CMHC’s Rental Market Survey (RMS) surveys the primary rental market in all centres with a population of 10,000 or more.*

*The secondary rental market represents self-contained units, such as condominiums and other rental homes not surveyed in CMHC’s RMS. There are two types of Secondary Rental Market Surveys: of rented Condominiums and of rented structures with less than three self contained units. The secondary surveys are conducted jointly or individually for selected centres across Canada.*

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

Please click [Methodology](#) or [Data Reliability Tables Appendix](#) link for more details

### 4.3.1 Condominium Universe, Rental Units, Percentage of Units in Rental and Vacancy Rate Condominium Apartments<sup>2</sup> Ontario - October 2013

Condo Sub Area	Condominium Universe		Rental Units <sup>1</sup>		Percentage of Units in Rental		Vacancy Rate	
	Oct-12	Oct-13	Oct-12	Oct-13	Oct-12	Oct-13	Oct-12	Oct-13
Ottawa-Gatineau CMA (Ont. Part)	26,216	27,844	5,426 a	6,680 a	20.7 a	24.0 a	3.2 b	3.6 c
Toronto CMA	281,445	295,884	63,660 a	77,255 a	22.6 a	26.1 a	1.2 a	1.8 a

<sup>2</sup>Only structures that permit the renting of condominium units are included in the Condominium Survey universe.

<sup>1</sup>Columns may not add in the estimated number of Rental Units due to a) rounding or b) variability due to sampling.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

- No units exist in the universe for this category n/a: Not applicable

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

### ■ Feature

**First Nations Mold Remediation Case Study – Ahousaht First Nation**  
This case study highlights the mold remediation efforts in the Ahousaht First Nation located in British Columbia. This community receives more than two times the amount of rainfall that Vancouver receives in a year. In addition, the majority of the older houses are situated in an area troubled by underground springs and poor drainage. The combination of heavy rainfall and problematic ground water conditions contributed to mold problems in the community's housing.  
Ahousaht's approach to solving its mold problem included special emphasis on building a new housing team, developing new construction policies and practices, and training local people to build capacity in the community to remediate and construct new houses. Ahousaht First Nation's housing has seen noticeable improvements and now the focus is on achieving good ventilation, circulation of air in the homes and exhausting the stale moist air outdoors.
